### Interests

- Traveller
- Learning New Things
- Listening Music

### About Me

Experienced Java Backend Engineer, proficient in Java, Spring Framework, and advanced backend technologies. Demonstrates expertise in software development principles, excelling in problem-solving, analytics, and ensuring top-notch code quality. Collaborates seamlessly with cross-functional teams, creating production-ready enterprise software tailored to diverse business needs

### Work Experience

**Associate Software Engineer** Haarmk Infotech (04/2023-Present)

#### Areas of Responsibility:

- **Domain and Hosting Website:** Application development from scratch following OOPS, design patterns, SOLID principles in accordance with business requirements.
- **Company website's backend:** Created Contact and Career APIs using Java J2EE programming, Spring boot, and MySQL database, with features of role-based authorization using Spring security and JWT.
- **Ticketing system:** Designed and created a ticketing system backend for the domain hosting website using Spring boot, JPA as ORM, and Spring security and did testing for it and analyze .

### Projects

#### 1- Online Food Delivery Application

It is a web service API. This will form a bridge between the restaurant and the customers which is the collaborative project of 4 team members executed in 5 days.

#### Features

- Sign up & Login in for Admin & user Verification
- Web Service for Admin
  - > can add and delete Restaurant
  - > can add new food items
- Web Service for Customers
  - > can add item to cart for purchasing
  - > can place an order from cart

#### Areas Of Responsibility

- Created Order and Bill Module

**Tech Stack-** Java | MySQL | SpringBoot | Hibernate | Maven |  
Swagger-Ui | Lombok
